

TL803

Premium Ceramic Film Sanding Disc

For automotive refinishing and metal surface preparation

TL803 is a premium ceramic film sanding disc for automotive refinishing and metal surface preparation. It combines strong cutting performance with fine-grade surface refinement for body filler, primer and ferrous metal applications. The 150 mm hook-and-loop format fits compatible orbital sanding systems.

PRODUCT BENEFITS

Strong cutting action. Efficient material removal for body filler shaping and ferrous metal surface preparation.

Sustained cutting performance. Maintains cutting action as sanding progresses, supporting continued material removal.

Fine-grade surface refinement. Finer grades support primer sanding and the refinement of ferrous metal surfaces.

Practical machine sanding. Hook-and-loop attachment makes disc changes convenient; perforated formats suit compatible dust-extraction pads.

TECHNICAL SPECIFICATIONS

Model / type	TL803 / Ceramic film sanding disc
Abrasive / backing	Ceramic / Film
Colour / diameter	Purple / 150 mm (nominal 6 in)
Attachment	Hook-and-loop
Grades	P40,P60,80, P240, P320, P400,P500,P600,P800,P1200.P1500,P2000
Perforation formats	6-hole and multi-hole configurations; confirm order specification
Machine compatibility	Matching 150 mm orbital sanding and dust-extraction system

APPLICATIONS

Automotive body filler	Material removal, shaping and subsequent surface refinement.
Automotive primer	Primer sanding and surface refinement within the specified coating process.
Ferrous metal surfaces	Material removal and surface preparation on iron-based metal substrates.

APPLICATION & ORDERING NOTES

Match the disc, backing pad and extraction-hole pattern. Select the grit to suit the substrate and coating process. Confirm required grit, hole pattern and packaging when ordering.
